## **1 INTRODUCTION**

This document declares conformity of ULTRASOUND DIAGNOSTIC SYSTEM SONIMAGE MX1 (hereinafter, MX1) to DICOM3.0.

### **1.1 Important Notes**

This manual does not guarantee the proper function or performance of the interactive operation between the MX1 and other interfaced devices. Please note the followings.

#### **Connection Test**

When the MX1 is used in connection with other devices, implement the connection test by referring to each DICOM conformance statement before start using the system, and confirm the data consistency and its stability. Specifically make sure to firmly confirm the consistency between the basic information of the Patient/Study/Image and the pixel size of the images.

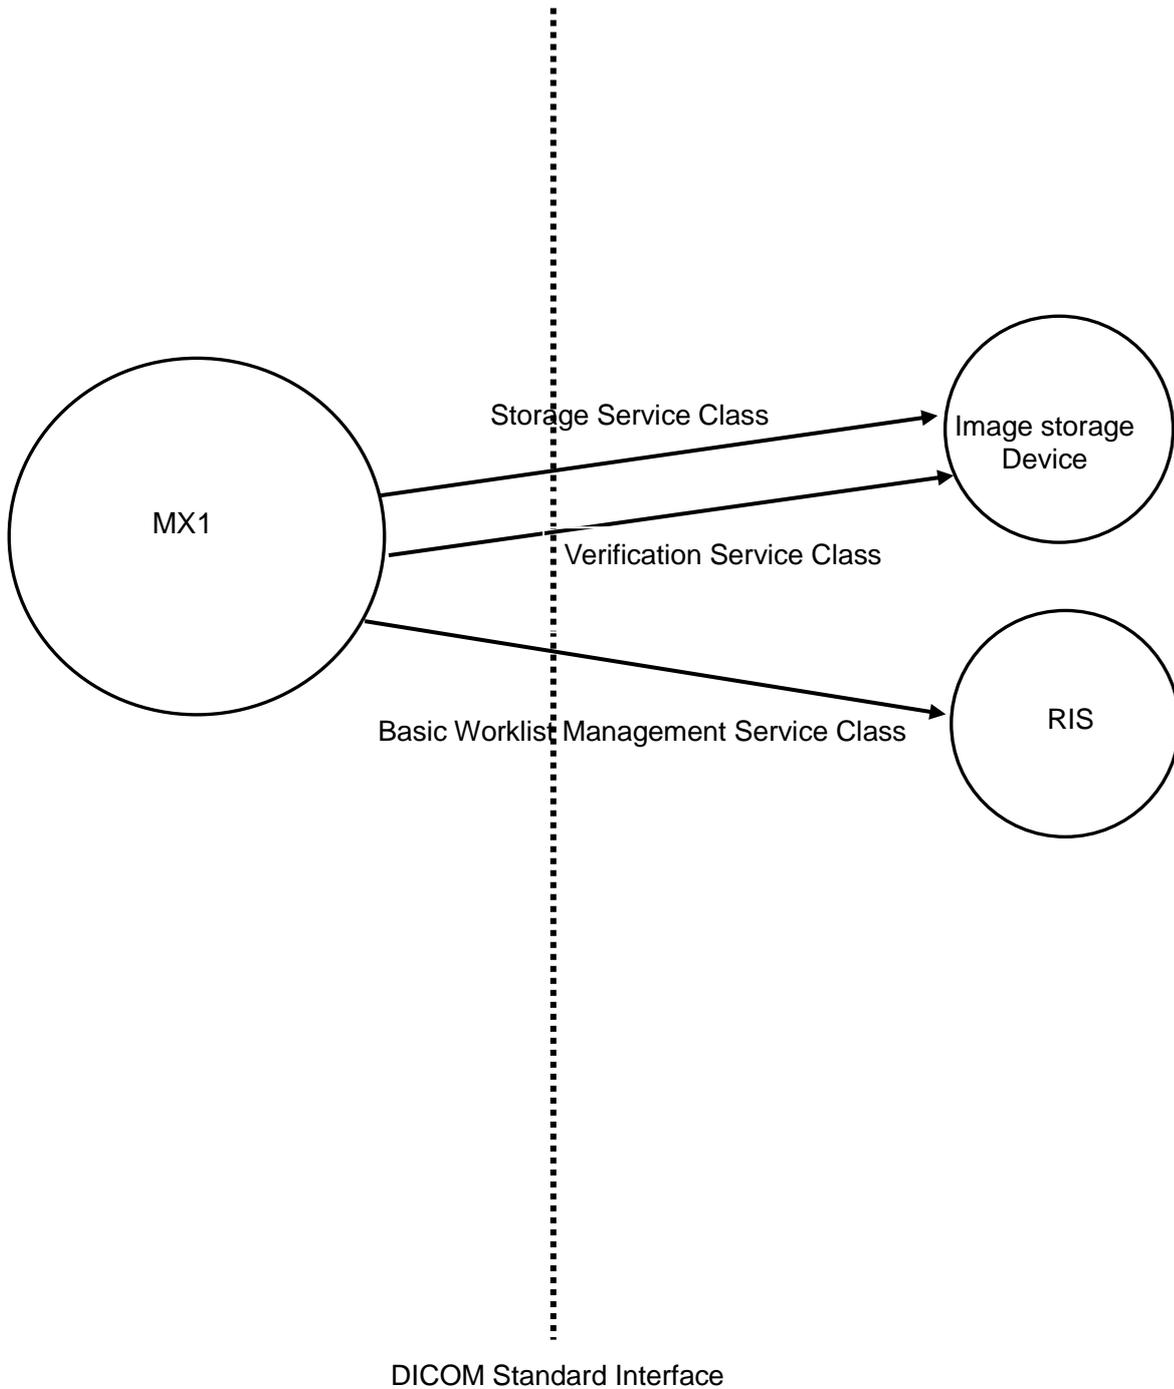

#### **Revision of DICOM Standard**

The DICOM standard is annually revised due to diversified operation and introduction of new technology, etc. Please note this may cause a loss of compatibility or connectivity as the result of upgrade of DICOM module in MX1 or connected module after the MX1 has been installed.

**2 IMPLEMENTATION MODEL**

The MX1 functions as an SCU for the Storage Service Class.  
The MX1 functions as an SCU for the Verification Service Class.  
The MX1 functions as an SCU for the Basic Worklist Management Service Class.

**2.1 Application Data Flow Diagram**

## **2.2 Functional Definitions of AE's**

### **2.2.1 Verification Service Class SCU**

The MX1 Verification Service Class SCU operates as a communication process, and issues a C-ECHO-RQ to an external AE.

### **2.2.2 Storage Service Class SCU**

The MX1 Storage Service Class SCU operates as a communication process. After receiving an association request for an external AE, it stores the image in image storage device according to C-STORE.

### **2.2.3 Basic Worklist Management Service Class SCU**

The MX1 Basic Worklist Management Service Class SCU operates as a communication process. After receiving an association request for an external AE, it retrieves the Patient/Study Information from RIS according to C-FIND.

### **2.2.4 Media Storage**

The MX1 Media Storage has following functions:

- Writing a collection of DICOM files to the medium
- Updating a medium by adding a new SOP instance to a collection of DICOM files that has already been existed

## **2.3 Sequencing of Real World Activities**

Sequencing of real world activities is not supported.

## 3.2.2.3 Ultrasound Image Storage SOP Class

This model conforms to the Ultrasound Image Storage, Ultrasound Multi-frame Image Storage, Secondary Capture Image Storage SOP Class.

The MX1 uses C-STORE to store image data on an image storage device (SCP).

Behavior : For SOP instances matching the Ultrasound Image, Ultrasound Multi-Frame Image, SC Image IOD request, the MX1 executes the C-STORE DIMSE service.

The MX1 recognizes the C-STORE response status and takes appropriate action depending on whether the service terminated normally or not.
